- A face to face skype meeting to have a better understanding with the client.
- Code needs to be generalized.
- Unit testing to be done.
- Reviewing the code step by step.
- Present a dummy model.
- To be clear with Cally.

Discussion:

Client needs that the employee should know how to format the excel sheets and he needs the combined excel. As the client is busy he asks the employee to postpone the further meeting on Monday and the employee wants a face to face skype video call for better understanding of the client requirements.

Before the next meeting is done the client wants the employee to start working on bunch of things. He wants that the code should be a retail code and a generic one and also should be faster and reusable so that it can be used in bunch of different applications and should run for single campaign id. Referential integrity should also be managed inside the code.

Client also wants unit testing to be done on the project as he is already running very busy and employee suggests for pi testing. At the time of next meeting he wants that employee should come with ten best questions on how the things are going with solutions and new ideas and he wants the code to be optimized and uniform.

Client wants the campaign summary first and then the site project. Employee suggest that he should copy the full main code and make changes accordingly to make it better and present it to client during the next meeting. The employee also finds difficulty as he doesn't have the oracle software with him and he gets the error ora10008 because not all variables are bounded.

Employee asks Client that if he has any time issues and in next meeting he would come with campaign summary, ten questions, site project so that he would present a model to Client and would also work on pomp.

Client in last week for four days worked for 52 hours and the employee works 40 hours a week. Client is running super busy these days and Client wants the employee to make it clear with Cally the manager.

Cally used to have brainstorm and she got this new job but as she is a manager she does not want to do work on the project and she just provides resources to the project team. Client is not boss he is just a project lead and tells people what to do. For Client Cally is not actually boss and he doesn't report to Cally anymore in any way. Cally reports to Client's boss's boss.

Employee says it's really a mess and asks Client who would give feedback to Cally about me, Sri, Sai, Bharat.

Client needs a draft that has an excel sheet API call that can get campaign summary form, API call that will pull data from campaign summary and it will present on the first tab of excel spreadsheet and then second tab where details can be fetched.

Employee also sits for 2 hours after dinner and sees what he can do.

Client is glad that employee is really enjoying the work and employee also recommends for a friend to the client for providing him the job.
